

ABSTRACT OF THE DISCLOSURE

COMPARTMENTALIZED STORAGE SYSTEM FOR TEMPORARILY STORING AND SUBSEQUENTLY MIXING AT LEAST TWO DIFFERENT SUBSTANCES

The present invention is directed to a compartmentalized storage system for temporarily storing and subsequently mixing at least two different substances. The compartmentalized storage system comprises a first storing compartment, with an optional a tearable seal, containing a solid sorbing substrate, such as a wipe, and a first substance. The compartmentalized storage system further comprises a second storing compartment having a second substance. The first and the second compartments are attached to each other by at least one common side, which common side comprises a frangible seal connecting the first and the second compartments. By applying force to the frangible seal, the seal will break and thereby allow the second substance in the second storing compartment to be mixed with the solid sorbing substrate and the first substance in the first storing compartment.
